Are you partnered with connectivity audit experts who produce huge cost savings for your clients?

A professional connectivity audit is a great way to improve your client's revenues and cut expense.

What value can a phone bill audit bring to your clients?

Dramatic Cost Savings — Historical telecom audit delivers significant company cost savings.

Simplicity — Organization and control of your telecommunications invoices and billing process.

Solve Billing Problems — Investigation and resolution of telecommunication billing issues.

Telecom Inventory — Reconciliation of phone bills to actual physical telecom services being used.

Financial Tracking — Demonstrated telecommunications cost savings.

Telecom Emergency Preparedness — Reliable disaster recovery and escalation documentation.

Advanced Telecom Security — Telecom hacking/fraud analysis and loss prevention.

Telecom Expense Management — Ongoing phone bill analysis and support.

Telecom Auditor Training — Education of company employees about cost-saving techniques.

An extensive connectivity inventory audit can reveal unused but live modem lines and data circuits that should have been disconnected five years earlier by the telecommunications carrier. An audit can also discover that some carriers are charging up to \$1.00 per minute for some long distance services and are being double billed for some services by their connectivity provider.

In some cases as businesses ramped up their new long distance service, they were charged penalties for not meeting the monthly minimum requirements (MMRCs) as specified on the long distance phone contract.
