

# Managed AI. Ready to run.

The enterprise AI platform your IT partner configures, governs, and supports.

## 01 · THE STACK

Synthreo gives your organization a secure AI workspace, production-ready agents, and the controls to use both with confidence. Your IT partner configures, governs, and supports the environment **as part of the technology relationship you already rely on.**

### 01 · RUN

#### Threo

**Your team's secure AI front door.**

One branded workspace for chat, agents, files, and connected tools across desktop and mobile, including iOS and Android apps.

- Access every leading AI model in one place
- Chat, work with files, and use connected business tools
- Keep company data out of public-model training

### 02 · EXECUTE

#### Wingtip

**Give it the job. Get back the work.**

Describe the outcome you need. Wingtip plans the work and returns a finished result.

- Run multi-step work from a plain-language request
- Deliver reports, documents, dashboards, apps, and other finished outputs
- Turn repeatable jobs into automations your team can run again

### 03 · BUILD

#### Pylon

**Where agents become dependable operations.**

Run business automations with the visibility and controls your team needs in production.

- Build custom agents for complex business needs
- Keep versions, roll back changes, and review run records
- See what ran, what it produced, and where it needs attention

### 04 · MANAGE

#### Canopy

**The controls behind responsible AI.**

Set the guardrails for how your organization uses models, agents, and connected tools.

- Control which models, agents, and connectors each team can use
- Apply usage budgets and keep environments isolated
- Give leadership a clear view of adoption, activity, and spend

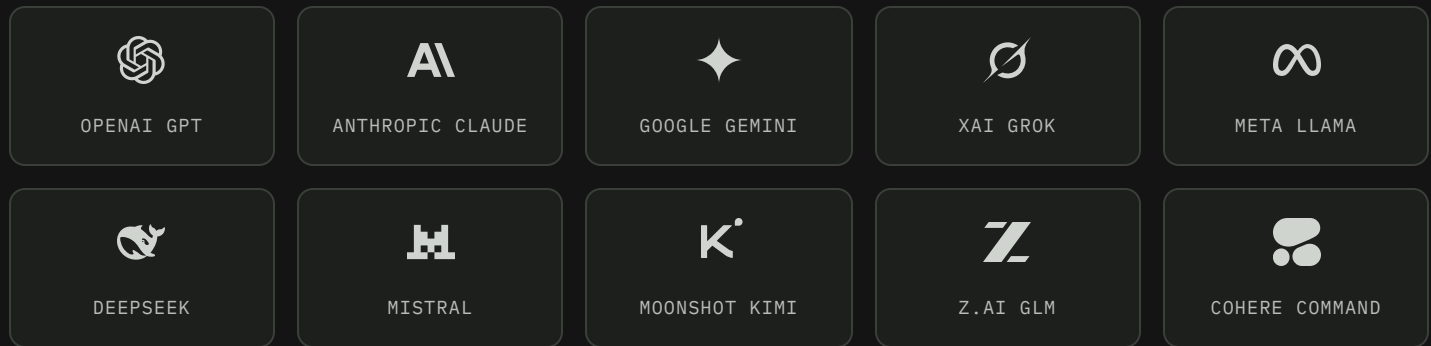

#### POSITION IT AS

**Synthreo takes AI beyond the prompt: from a plain-language request to governed, repeatable work in your business.**

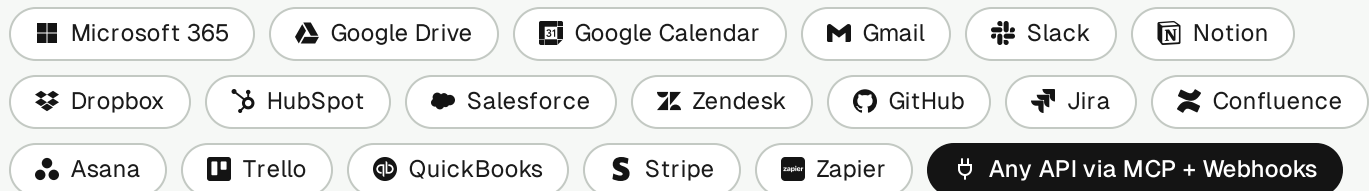

## Leading AI models. One governed interface.

Your team has access to all the leading AI models through one interface, without locking your organization to a single vendor. Use the right model for each task, and switch as better options emerge, without changing how you work. Every model call runs with Zero Data Retention, and Synthreo does not use your data to train public AI models.

## 03 • THE CONNECTORS

Connect the tools your team already uses directly from the workspace. Your IT partner works with you to establish the right connectors for your business, and for custom systems, Synthreo supports API integrations through MCP and signed webhooks.

## 04 • BUILT FOR YOUR ENVIRONMENT

### WHITE-LABEL

#### AI your team recognizes.

Give your team a workspace that carries your company name and logo, including the iOS and Android apps. It feels familiar from the first sign-in because it belongs to your organization.

### SECURITY

#### Data controls without workarounds.

Use multi-tenant isolation on Azure, Zero Data Retention on approved model calls, and governance tailored to your environment. Your data stays separate from other customers and out of public-model training.

### CONFIGURED

#### AI shaped around your business.

Skills and instructions for your industry, policies, and workflows shape how the AI works for your team, tuned together with your IT partner as your business evolves.

### SEE IT RUNNING

Bring one real workflow. In 30 minutes, see how it can run inside a secure, partner-managed AI environment.
