

FREE Website Audit & Dark Web Scan

Your website is your storefront, and your employees' email addresses are one login away from your files, your clients, and your bank. We will **review the public-facing security and performance of your website**, then **scan dark web marketplaces for your company's exposed credentials**. You get a plain-language report and a local specialist to walk you through what to fix first.

Scan the QR Code or visit the website below to get started to see what attackers can see, and what the dark web already knows about your business.

Two checks. One request. No cost, no obligation.
