Managed IT & Cloud Services

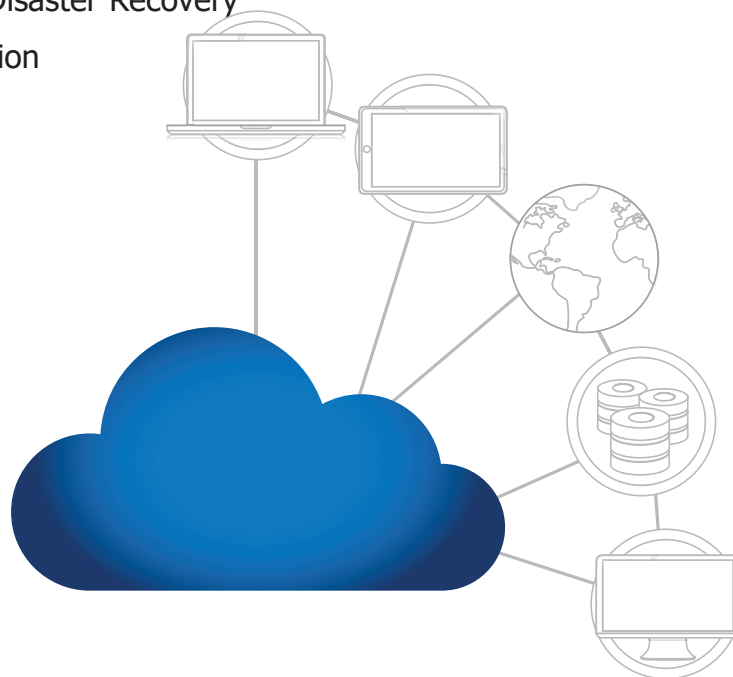

Always Free Evaluations!

At HTI, we take a proactive approach to managing your IT infrastructure, recommend improvements in business processes, and share best practices designed to help your organization accomplish its strategic business objectives through technology. We can help establish goals that focus on how improved IT services delivery can result in better business value. Thus, helping you achieve higher profitability, productivity, and competitive advantage.

You will feel as though you have an in-house enterprise IT department. As an HTI client, you'll have access to knowledgeable support staff that can be reached immediately.

We first understand your business, how you use technology today, and how that may change in the future. Together, we determine the most optimal approach to support your business. We then manage your IT network with the upmost care, educate your team to improve their technology utilization, and then customize a solution that may include the following based on your needs:

- Remote Management & Monitoring
- Anti-Virus / Email
- Business Continuity & Disaster Recovery
- Project Work / Installation
- Virtualization
- Cybersecurity
- Help Desk

Zulty's Next Generation VoIP Phone System

WORK ANYWHERE WORK EVERYWHERE

Improving Collaboration, Communication, and Patient Care with Zultys Healthcare Systems

If there's one industry under the national spotlight where there's constant pressure for technology—to provide better patient care and responsiveness, improve processes, while cutting costs—it's healthcare! Zultys IP Phone Systems with Unified Communications are changing the communication methods of healthcare organizations – health plans, hospitals, medical practices and diagnostic centers. These organizations need to communicate and collaborate 24/7 whether in the facility, office, at home or on the move.

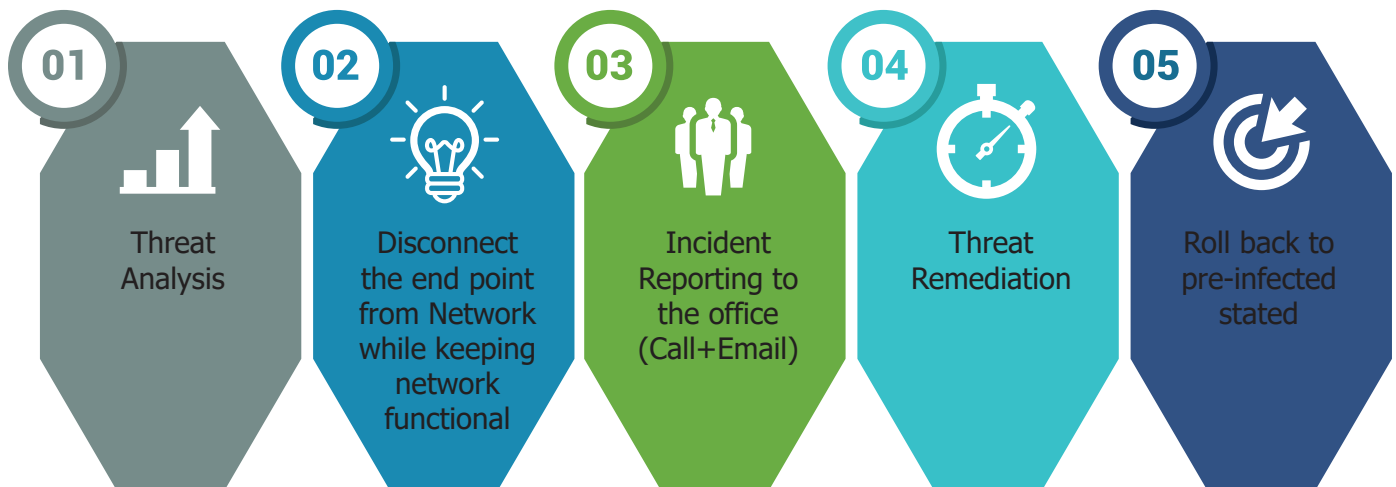

Ransomware Protection

HTI's Ransomware Protection platform defends every endpoint, against every type of attack, at every stage in the threat lifecycle.

Healthcare organizations use a diverse set of IT infrastructure spanning OS platforms, servers, user endpoints, cloud, and Internet.

Our Ransomware Protection combines next-gen prevention and endpoint detection and response capabilities in a single agent to achieve autonomous Endpoint Protection Platform at machine speed. In Protection Mode, the agent not only identifies the attack but also thwarts the contagion.

HOW A THREAT IS CONTAINED AND ELIMINATED

Benefits of Secure Endpoint Protection:

- Stop the threat before compromise
- Threats are quarantined and killed.
- Remediation Rollback feature kills the threat and reverse all malicious actions.
- Dedicated SOC Team
- Protection against any new Malware that comes out.

HIPAA Compliance

High Tech Innovations has taken a very active role in, not only helping to educate the healthcare community, but to also bring very valuable HIPAA compliance tools to its customers.

HTI's trained specialists are well versed in all the legalities and requirements of HIPAA. After an initial full assessment, they will highlight all potential risks. For example, does that practice follow the right procedure for disposing off its sensitive patient information? Do they store files at a secured location? Is the practice backing up patient records properly?

HTI's HIPAAShield is the most comprehensive HIPAA compliance program on the market. HTI HIPAA professionals work very closely with the client to put the appropriate safeguards in place that not only help a practice pass an unexpected HIPAA audit, but also help ensure that patient records are NEVER compromised.

Surveillance

Video surveillance does more than just protect your practice from crime. It protects your staff in case of customer disputes. It enforces safe work conditions. It allows you to see whether procedures and protocols are being followed. HTI video surveillance solutions benefit practices of every size.

Surveillance is critical for all dental and medical offices to minimize the impact of downtime, floods, power outages and virus attacks. Installing efficient and secured surveillance systems is mandatory for all dental and medical practices to allow them to operate without interruptions in times of disaster.

Surveillance cameras can go a long way to help defend practices against HIPAA violations. High Tech Innovations provide easy monitoring solutions for dental and medical practices. HTI surveillance systems can keep an eye on valuable office records and assets and protect practices from being vandalized anytime.
