

SIEM / SOCaaS

SOLUTIONS GRANTED

THE CHALLENGE IS EXPANDING

- Cyberattacks and breaches are increasing
- Environments are more complex
- Security budgets are growing in response

TRADITIONAL METHODS CAN'T KEEP UP

One solution to this problem is to cobble together disparate solutions. But this leaves blind spots and creates a large amount of alert noise. This is why you see "prepared" organizations get breached. Plus, it takes the industry 200 days to detect a breach. This gives the criminal 6 months to exfiltrate data! Clearly a better way of detecting, alerting, and remediating these threats is needed.

OUR SOLUTION

Rather than ignoring blind spots, our SIEM solution (backed by our 24/7 SOC) provides protection and centralized visibility for greater control over your security.

- Reduce breach detection to minutes
- Mitigate the risk of data exfiltration
- Improve the accuracy of detecting critical security events
- Automatically piece complex attacks together across cloud, endpoint, network, user, applications, and SaaS
- Rest easily, knowing you're keeping your clients safe

SIEM / SOCaaS

Our SOC team leverages our AI-driven Open XDR SIEM to provide proactive threat analytics and automatic remediation for your firewall and server.

SIEM / SOCaaS Foundation

Network Traffic

Ingest network traffic coming from your switch(es) tap/mirror port via a network sensor.

Additional Device

Ingest data from additional servers, switches, or firewalls.
